

Pentagon International announces the benefits of Energy Saving Window Film for Leed

Pentagon International's new range of Window Films are becoming a key choice for companies looking to improve their Leed rating and save money on energy cooling costs.

All buildings, new and existing, applying for Leed certification must meet the EPA Energy Star rating of at least 60. The energy saving benefits of window film can help companies to achieve the initial rating of 60, and it also can provide additional credits once the baselines are met. Solar energy saving window film is covered by the Leed for Existing Buildings Certifications.

Gavin Bannerman, Sales Manager, Pentagon International FZCO said:

'The application of our energy efficient films can qualify a company to earn Leed credits in several key areas including energy performance, light pollution reduction, glare reduction, thermal comfort and also in the innovation category. In addition to the gaining of Leed credits in those areas, the products also have the additional everyday benefits of substantial heat and glare rejection which is ideal for the upcoming summer in offices around Dubai.'

Pentagon International's window film is recognized as one of the most energy efficient products in today's market. With the global shift towards a greener way of thinking the Dubai based company are happy to consult with companies in their drive to reduce their carbon footprint and cut energy costs in a tough financial climate.

By reducing the heat from the sun coming into a building, the cooling requirement is significantly less when Pentagon's Premium window film is applied to the internal face of the glazing, this in turn contributes to a huge saving in bills and also improves the working environment.

Pentagon Premium rejects 53% Solar Energy, blocks 99% of harmful UV rays and helps maintain a cool, pleasant working environment.

Pentagon International is amongst the world leaders in the supply & installation of Security, Solar, Decorative and Energy Efficient Window Films. Past projects include work for the Jumeirah Group, Hyatt Hotels & Resorts, Deutsche Bank and Dubai International Airport. With offices around the world, Pentagon International has been at the forefront of the progression towards higher technology and energy saving products and services in their industry.
